

Math Packs

Publisher: [Dale Seymour Publications](#)

These sets of math games are designed for parents and their elementary age children to play together and at home, at school functions, in the library, and at after-school programs or clubs. The games, based on *Investigations in Number, Data, and Space®*, the K-5 math curriculum developed at TERC, can also be used as a classroom resource. Each *Math Pack* contains everything needed to play, including directions, score sheets, and materials such as dice, plastic chips, and number cards. *Math Packs* also include information on the math content in each game, and ideas for helping children and parents get the most out of learning and playing together.

Counting Games: How Many in All?

Counting, addition, and coin games. Ages 5-8.

Number Games from 10 to 20: More, Less, or Equal?

Addition and subtraction. Ages 5-8.

Data Games: Use the Clues!

Logic, sorting, and data. Ages 5-12.

Computational Games: How Close Can You Get?

Addition, subtraction, multiplication, and division with whole numbers and decimals. Ages 8-12.
