

Search for Extraterrestrial Life Museum Exhibit

Principal Investigator:

Funders:

TERC is working with the New York Hall of Science to create a permanent exhibit entitled "Extreme Life." This exhibit examines themes central to the field of astrobiology, such as life on Earth, planetary geology, and the search for extraterrestrial life. These themes also form the core of TERC's yearlong, high school astrobiology curriculum. For the exhibit, TERC will develop 10-12 hands-on activity stations, as well as lesson plans for the museum's education staff to use in workshops with school groups.
