

All Included in Mathematics—Expansion and Dissemination (AIM-ED)

Principal Investigators: [Jim Hammerman](#) and [Judy Storeygard](#)

Funders: The National Science Foundation

Website: <http://www.horizon-research.com/project-aim-all-included-in-mathematics/>

Project AIM represents an ongoing effort to promote and support the communication of meaningful mathematical content to students from a variety of backgrounds, by way of teacher professional development. A key component of the professional development is to apply concepts from literacy education in an effort to increase and support classroom discourse around mathematics. AIM-ED takes Project AIM from its development phase to a more rigorous examination of its efficacy. SEEC evaluators are collaborating with the Project AIM team to conduct a quasi-experimental analysis of its impact on teacher and student learning and to provide feedback regarding the scaling up and dissemination of the AIM program.

Clients and Collaborators:

North Carolina State University (NCSU), Horizon Research
