

Digital Content Enhancements for the Ecology Curriculum

Principal Investigator: [Jeff Lockwood](#) and [Gilly Puttick](#)

Funder: TERC

TERC's 1997 *Ecology: A systems approach* broke new ground in high school curriculum, taking a "molecules to systems" approach, and providing the first high school materials to embrace energy in all its forms, from organismal physiology to fossil fuel consumption and climate change. Now out of print, it remains a trove of valuable and imaginative materials. We have taken some of the "Carbon and Energy" materials and experimented with new formats suitable for electronic publishing, and hope to bring more of the materials out in refreshed form in the future.
