

# Online Professional Development: Science Inquiry in the Online Environment

Sue Doubler and Wynne Harlen

*Online Professional Development for Teachers* (2004) Greenwich, CT: Information Age Publishing. pp. 87-104

## Summary

Nineteen contributions present recent research on the use of online technologies for teacher education and professional development around the world. Cases described include (for example) a large-scale computer-mediated conference environment to support professional development; a fully online master's program in science education for elementary and middle school teachers; and a multinational program that affords science and mathematics teachers the opportunity to share their students' work.
